

WEBSITE DESIGN & DEVELOPMENT PROPOSAL

Prepared For: **PolyVerb AI**

Prepared By: **Zerozilla**

Date: 20 March, 2026

1. Engagement Overview

PolyVerb AI is an AI-native platform for internationalization, localization, and multilingual intelligence, enabling businesses to scale seamlessly across global markets.

The objective of this engagement is to design and develop a high-quality, conversion-focused website that clearly communicates the platform's value proposition while maintaining a refined, enterprise-grade user experience.

This website will function as a product-led marketing interface, translating complex capabilities into structured, intuitive, and engaging user journeys.

2. Context and Requirement Understanding

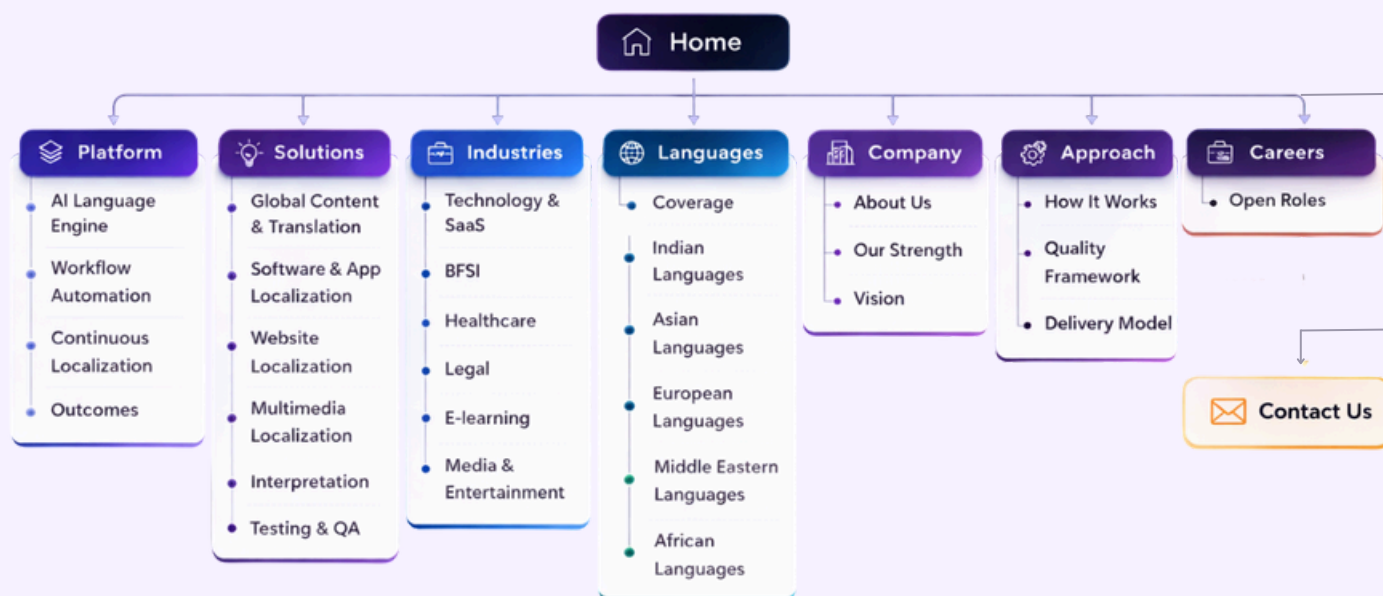

Based on the shared inputs, we understand that:

- The website will consist of approximately 10–12 pages
- Content has been fully defined across all sections
- A clear UI direction and visual system has been established
- Workflow diagrams are conceptual and require structured UI representation

The requirement is to translate this foundation into a cohesive digital experience, ensuring clarity, consistency, and strong positioning across all touchpoints.

3. Website Architecture

The proposed website structure is designed to ensure clear navigation, logical content flow, and effective communication of the platform's capabilities, enabling users to easily understand the offering and navigate across key sections.

PolyVerb AI's website is designed with a clear and scalable architecture that highlights its platform capabilities, solutions, and global reach. Each section is structured to guide users intuitively from understanding services to exploring industries and ultimately taking action through contact or vendor registration.

- Platform

Core AI capabilities including language engine, workflow automation, and continuous localization.

- **Solutions**

Comprehensive services such as translation, localization, interpretation, and QA.

- **Industries**

Target sectors including BFSI, healthcare, legal, e-learning, and media.

- **Languages**

Coverage across Indian, Asian, European, Middle Eastern, and African languages.

- **Company**

Information about the organization, its vision, and strengths.

- **Approach**

Details on execution methodology, quality standards, and delivery model.

- **Careers**

Open opportunities and hiring information.

- **Contact Us**

Primary conversion point for client enquiries and partnerships.

4. Scope of Engagement

Our Responsibilities

We will deliver the complete design and development of the website, including:

- Designing all pages in Figma aligned with the defined UI direction
- Structuring content into clear, conversion-oriented layouts
- Translating workflows and platform capabilities into intuitive visual sections
- Developing a fully responsive and performance-optimized website
- Implementing refined UI interactions and transitions
- Setting up Contact and Vendor lead capture forms
- Preparing the website for deployment

Execution Approach

Our approach focuses on delivering a simple, high-clarity, and premium experience:

- Aligning with the defined visual system (colors, typography, gradients)
- Establishing strong information hierarchy and content flow
- Designing for clarity, readability, and engagement
- Applying subtle interactions to enhance user experience
- Ensuring fast performance and seamless responsiveness

The overall experience will prioritize clarity of communication over complexity, while maintaining a modern, product-led feel.

5. Deliverables

- Complete Figma design for all pages
- Fully developed responsive website
- Structured implementation of all provided content
- Functional Contact and Vendor registration forms
- SEO-ready page structure and metadata setup
- Deployment support and go-live assistance

6. Commercials

To align with both immediate requirements and long-term scalability, we propose two implementation approaches:

Option 1: WordPress

A structured CMS-led implementation focused on efficient content management and operational ease, while maintaining a clean and consistent user interface across all pages.

Investment: **₹2,50,000 + GST**

Option 2: Custom React Build

A high-performance, component-driven architecture designed to deliver a seamless, product-grade experience. This approach enables greater flexibility, refined interactions, and scalability aligned with evolving platform needs.

Technology Stack: React (frontend), Tailwind CSS (styling), Node.js (for API/form handling, if required)

Investment: **₹4,50,000 + GST**

7. Payment Milestones

The project will follow a milestone-based payment structure:

- **50%** Advance payment upon project kickoff
- **50%** Post deployment and final handover

8. Exclusions

CMS can be integrated based on content needs.

The client is required to define:

- Editable sections
- Required controls (text, images, etc.)
- Level of flexibility (e.g., content updates, formatting)

CMS scope will be planned separately based on these inputs.

9. Project Timeline

Phase	Activities	Timeline
UI/UX Design & Planning	- Understanding requirements and aligning on design direction - Finalizing sitemap and page structure - Designing homepage and inner pages in Figma	Week 1 to Week 2
Development	- Frontend development and page implementation - Responsive adaptation across devices - Integration of forms and key functionalities - Ongoing performance optimization	Week 3 to Week 6
Testing, Deployment & Optimization	- Functional testing and bug resolution - Cross-browser and device compatibility checks - Final performance tuning and refinements - Deployment on hosting environment and go-live support	Week 7

Total Estimated Timeline: Approximately 7–8 Weeks

10. Lead Management and Integrations

All form submissions (Contact / Vendor) will be configured to:

- Be forwarded to designated email IDs, and/or
- Integrated with external systems via API (CRM integration)

For React implementation, leads can be seamlessly routed through API-based integrations based on CRM requirements.

Integration scope will be finalized based on API availability and client-provided specifications.

11. Closing Note

PolyVerb AI has a strong foundation to establish a distinctive and high-impact digital presence.

This engagement focuses on delivering a clear, structured, and product-driven website experience that effectively communicates the platform's capabilities while maintaining a refined and scalable interface.

We look forward to collaborating and bringing this vision to life.

12. Legal & IP

All design and code IP will belong to Polyverb AI, with the NDA accepted, all third party licenses disclosed, and no proprietary lock-in.

13. Acceptance

14. Company Overview

Zerozilla Infotech Pvt. Ltd. is a digital engineering and product development company with over 12 years of experience delivering enterprise B2B platforms.

We partner with technology and consulting organizations to design scalable digital ecosystems that support business growth and talent acquisition.

14.1 Why Zerozilla

Zerozilla is an enterprise-focused digital engineering partner specializing in high-performance B2B websites and platforms for technology and consulting organizations. We differentiate ourselves through a combination of strategic thinking, engineering rigor, and accountability-driven delivery.

Key Strengths :

- **Proven Enterprise B2B Experience**

Delivered 400+ enterprise websites and digital platforms translating complex services into structured, conversion-driven digital ecosystems.

- **12+ Years of Industry Expertise**

A strong track record in building scalable, secure, and performance-optimized digital systems aligned with enterprise standards.

- **SEO & AI-Driven Digital Architecture**

Deep expertise in SEO-first information architecture, AI-assisted search optimization, and structured content frameworks that support long term organic growth.

- **Advanced UX/UI & Custom Engineering**

Conversion-focused UX design and lightweight custom WordPress development that minimizes plugin dependency while maximizing performance and maintainability.

- **Flexible Engagement Model**

Adaptive collaboration frameworks aligned with client workflows and milestone-driven execution.
